Art Unit: 1651

The amendment filed 1/27/05 is acknowledged. Claims 1, 5 and 13 are being considered on the merits.

Claims 6-10 are withdrawn from consideration as directed to a non-elected invention.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:
The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 13 are/remain rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the production of histidine with strains derived from *Escherichia coli* FERM-BP-6673, does not reasonably provide enablement for the production of this amino acid with any *Escherichia coli* resistant to 150 mg/l of primaquine or alkali metal salts thereof. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

Response to Arguments

Applicant's arguments and the new Abe declaration have been fully considered but they are not deemed to be persuasive.

The data in the declaration demonstrate that after a number of random mutagenesis and selection steps of *E. coli* strain ATCC 27325, a large number of picked up strains and the parent strain were subjected to HPLC to assess histidine production. From this selection process, it is indicated that one strain was selected that produces L-histidine (TZA-51), page 3, paragraph 2. However, in direct contradiction to this statement, Table 1 indicates that this strain does not produce L-histidine. The selection of further strains that do produce histidine was effected by random mutagenesis and selection with 400 mg/l primaquine. These results fail to demonstrate a clear correlation between resistance to 150 mg/l primaquine as claim designated and the production of L-histidine by any *E. coli*. The effect of resistance 400 mg/l primaquine is not informative in this regard.

Art Unit: 1651

Thus, the scope of the claims is not commensurate with the teachings of enablement of the specification.

Claim 5 is allowable.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
